

USE CASE DIAGRAM: TOURISM SURVEY & ANALYTICS SYSTEM

The **Hinunangan Tourism Survey System** allows tourists to conveniently submit feedback, ratings, and suggestions through an online platform. Users can log in to the system, answer surveys, view tourism information, and provide comments regarding their travel experience. The system also enables staff encoders to assist in recording and managing survey responses, especially for walk-in tourists.

On the administrative side, the administrator manages user accounts, survey questions, tourism destination data, system security, and statistical reports. The admin can also monitor system activities, maintain the database, and analyze tourist feedback to support better tourism planning and decision-making. This system improves efficiency by automating survey collection, organizing tourism data, and providing a user-friendly experience for tourists, staff, and administrators.
